

OPEN DATA **BR**

Overview & Training

Federation of Greater Baton Rouge Civic Associations

March 12, 2015

<http://data.brla.gov>

Summary of 2015 Digital Initiatives

- ▶ Redesign of 3-1-1 System (Summer 2015)
 - Adjustments to make system easier to use for call takers, DPW staff and more user-friendly for public citizens
 - Includes the development of Apple and Android mobile device apps
- ▶ Launch of new Geographic Information System (GIS) website (2nd Quarter, 2015)
 - New mapping capabilities that are not available in the existing City-Parish GIS web applications will be provided as part of this web portal
 - All interactive web maps and applications developed in the web portal can be used on computer desktops, and iOS and Android mobile devices
 - Web portal also hosts a catalog of web services that can be leveraged by application developers and GIS professionals
- ▶ Public Engagement via Social Media/Digital Platforms
 - Emphasis on two-way communications with the public
 - Developing infrastructure for real-time communications during emergency situations
 - Launched Baton Rouge Police Department Facebook page February 2015 as part of pilot program - [facebook.com/batonrougepolice](https://www.facebook.com/batonrougepolice)
- ▶ Open Data BR

What is Open Data?

- ▶ Open data is a concept that is based on the idea that public data should be freely available and accessible to everyone
- ▶ Serves as a foundation for Mayor Holden's larger goal of making our City-Parish government more efficient, transparent and accountable to the public
- ▶ Secondary goals include:
 - Increasing our digital presence, both locally and across the region
 - Building a smarter government, leveraging technology wherever possible
 - Supporting a collaborative environment that allows citizens to work hand-in-hand with government to solve key problems and issues

Why Open Data?

- ▶ There are massive amounts of data maintained by City-Parish, and data drives decision-making
- ▶ The public should be able to access this data in order to make informed decisions about their community
- ▶ Data can be used to support the creation of unique solutions to everyday problems
- ▶ Builds on the recommendations outlined by IBM as part of the Smarter Cities Challenge Grant

Who does it benefit?

- ▶ Having unfiltered access to City-Parish data benefits the entire community
- ▶ Residents can view crime or traffic incidents near their homes
- ▶ Businesses can view permitting and development activity throughout the Parish, or develop applications that interface with the data
- ▶ Universities/students can use this data for research projects or for the development of applications
- ▶ City-Parish employees are able to more easily access data across agencies; can use data to identify trends or service level gaps

A strong process leads to strong results

- ▶ Builds off of best practices established by cities such as New York City, Chicago, San Francisco and more
- ▶ Strong review process leads to better quality of data
 - Potential data for inclusion is identified either internally or by the public
 - The department that maintains the data, Information Services, Parish Attorney and the City-Parish administration all participate in the review process
 - Data is uploaded to site
- ▶ A complex, but necessary process to ensure that inappropriate data (HIPAA, proprietary or other protected data) is not erroneously published

Open Data BR - Pilot Phase

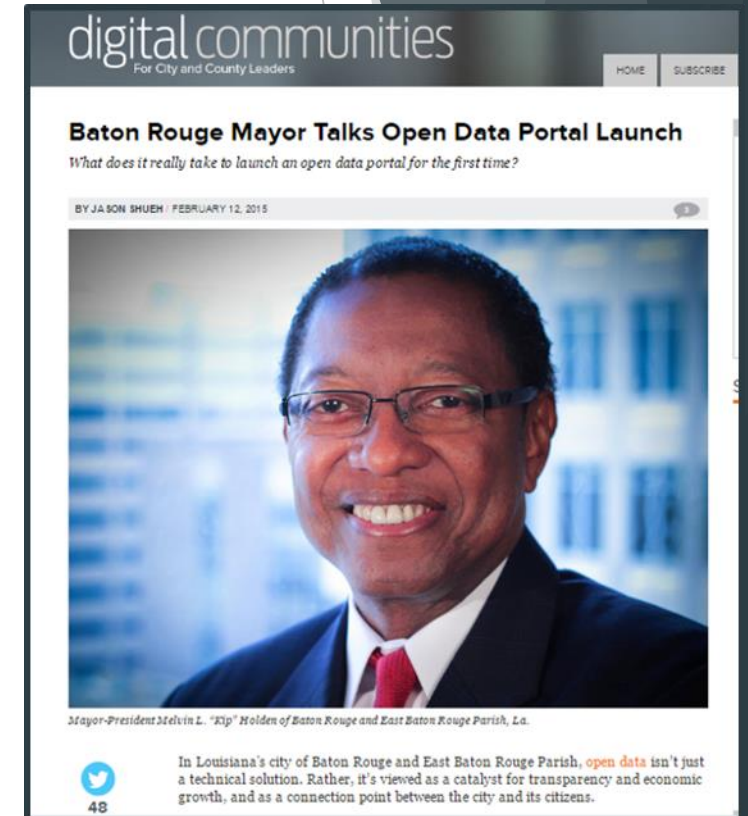

- ▶ Continual process of data set identification
 - “Suggest a Data Set” feature allows the public to suggest certain data sets or request access to data not currently featured on the site
 - Public notification functions for new data sets added to portal
- ▶ Routine updates to existing data - most data sets updated daily or weekly
- ▶ Outreach to other agencies to request their participation in the Open Data BR initiative (e.g., EBRSO, Assessor’s Office, etc.)
- ▶ What’s next?
 - Procurement data, traffic flow data and more
- ▶ The end goal: a true open data environment

Data sets currently available:

- Salary data
- Police incident data
- Fire incident data
- Traffic incident data
- Permitting data
- Adjudicated property data
- City Court warrant information
- Public facility information
- GIS landmark and scenic view information

Open Data BR To-Date

- ▶ According to the U.S. government (data.org), 46 cities/counties have open data initiatives
 - Open Data BR: #47
- ▶ Pilot phase launched January 31, 2015
- ▶ Over 200,000 page views in the first month alone
- ▶ Tremendous response from community, media and more for transparency and ease of access to public data
- ▶ Featured on homepage of Government Technology via Q&A with Mayor Holden
- ▶ Creating our own best practice - recently contacted by a group in New York wanting to know more about our process, approach and open data model

Functionality of Open Data BR

- ▶ Wide variety of data that can be visualized or interacted with in a number of different ways

Data Actions

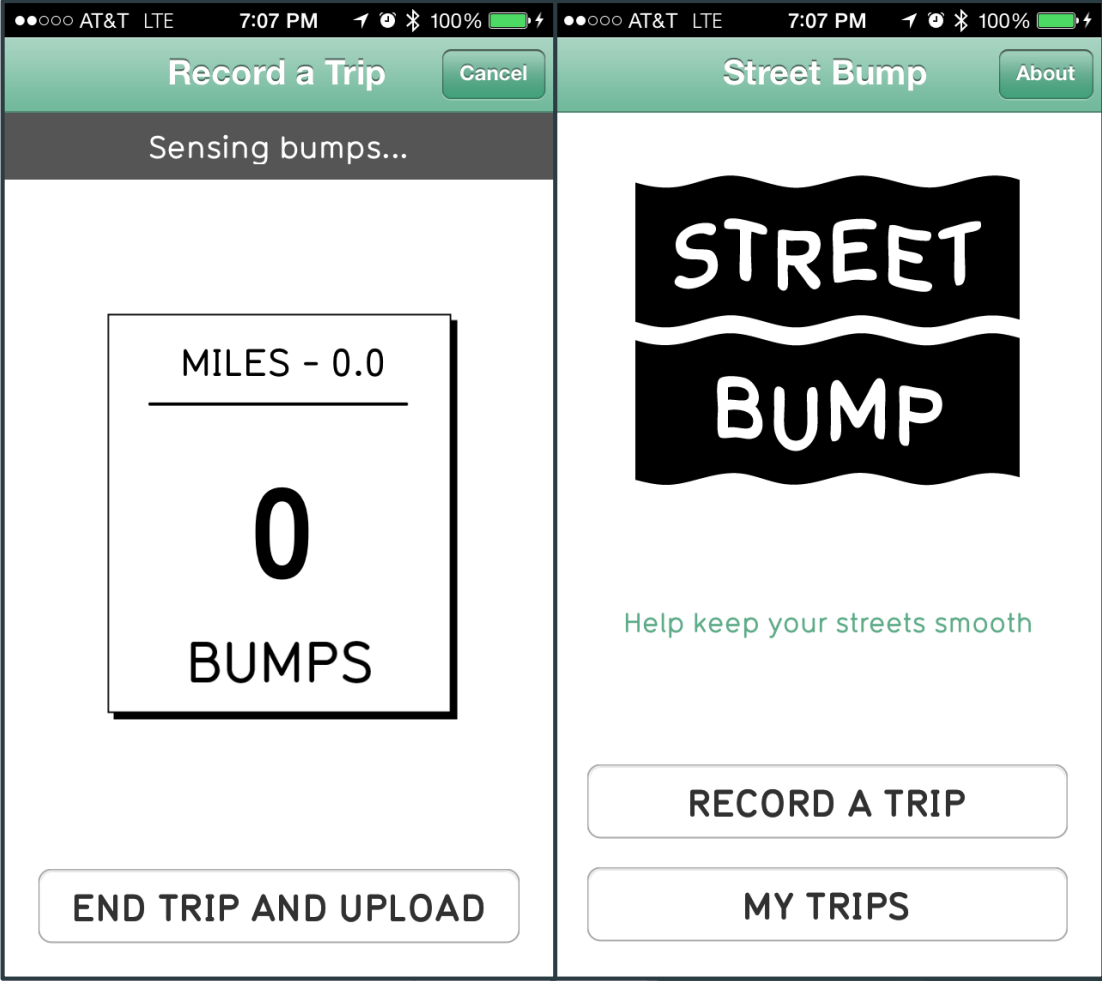

- Sort
- Sum
- Count
- Filter/Search

Data Visualizations

- Graphs
- Maps
- Embedded visuals
- Download

- ▶ Application Programming Interface (API) allows software developers to build applications that interface with data

Potential Applications of Open Data BR

Open Data BR Training Sessions

- ▶ Two upcoming training sessions to familiarize the train the public on how to use the system

1

March 17, 2015, 1:00 p.m. to 2:00 p.m.

Attend in person at the Goodwood Main Library, Conference Room 102 *or* remotely via webinar

2

March 23, 2015, 7:00 p.m. to 8:00 p.m.

Attend remotely via webinar only

- ▶ For more information and webinar access instructions, visit brgov.com/opendatabr
